Card Faces

The current existance of the Flip ability demands the possibility of cards that internally have two faces. The current model of what a Card is is not capable of supporting this idea.

Technical Implementation

1. Card Faces
    1. A card face has: Name (optionally), Type, and Cost (a number which may be a variable).
    2. A card face may have a Flip Cost (a number which may be a variable).
